Storyboard: W01E02 (revision 2) — RAG explained: how chatbots read your documents

8 scenes, 55 s. Review history: r1: changes_requested ("Make it shorter and add a real example from my classroom.") r2: approved

Frames are the real rendered slides (placeholder art in mock mode). Times come from the measured voice track.

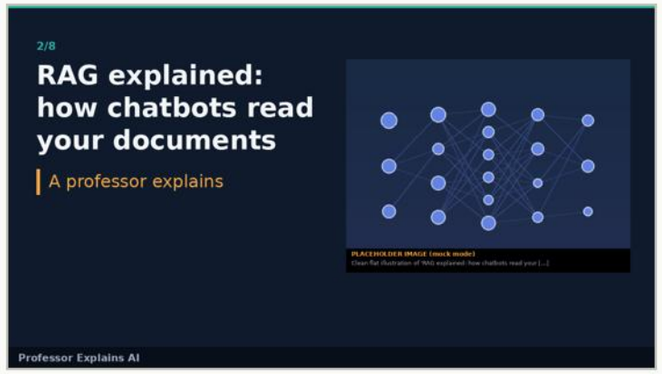

Scene 1 · 0:00–0:09

The question

VOICE:
Why can a chatbot answer questions about a PDF it has never seen before? In the next few minutes I will explain it the way I explain it to my students.

ON SCREEN: RAG explained: how chatbots read your documents

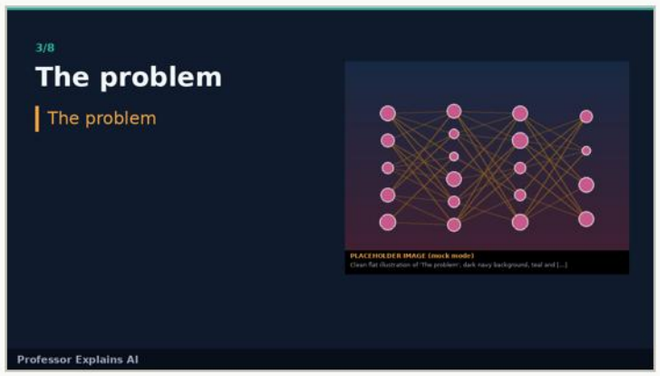

Scene 2 · 0:09–0:16

RAG explained: how chatbots read your documents

VOICE:
I teach this in my college classes, and this is Professor Explains AI. Let's get into it.

ON SCREEN: A professor explains

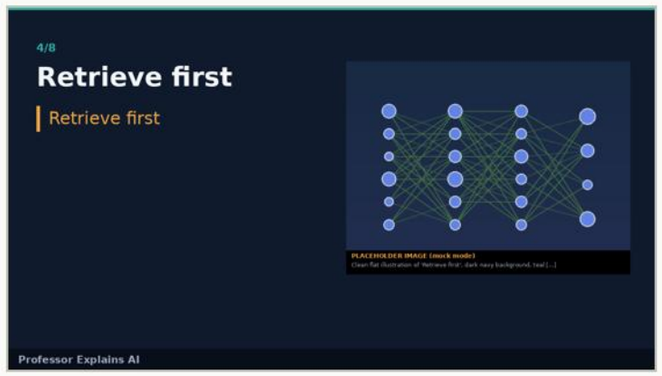

Scene 3 · 0:16–0:22

The problem

VOICE:
A model only knows what was in its training data. Your company handbook was not in it.

ON SCREEN: The problem

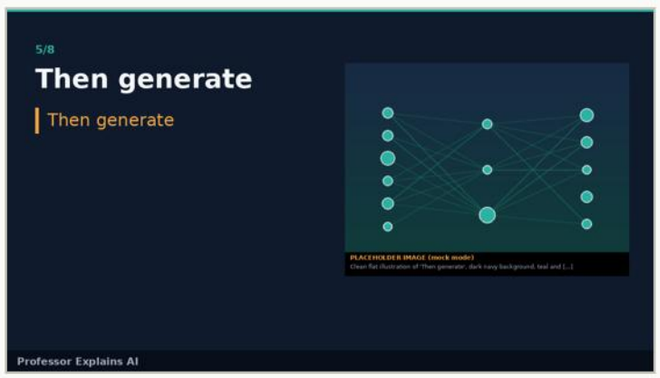

Scene 4 · 0:22–0:29

Retrieve first

VOICE:
Retrieval augmented generation searches your documents first and finds the few passages that match the question.

ON SCREEN: Retrieve first

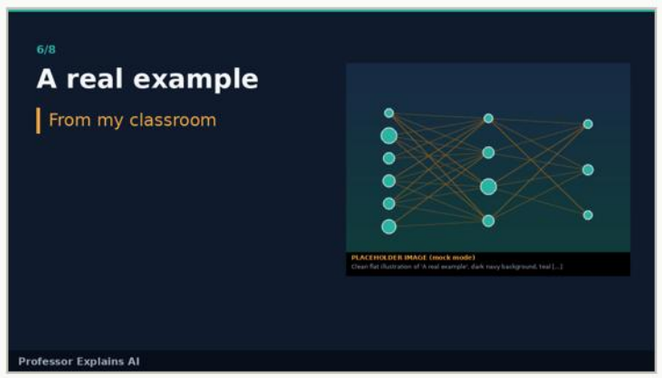

Scene 5 · 0:29–0:35

Then generate

VOICE:
Those passages are pasted into the prompt, and the model writes an answer grounded in them.

ON SCREEN: Then generate

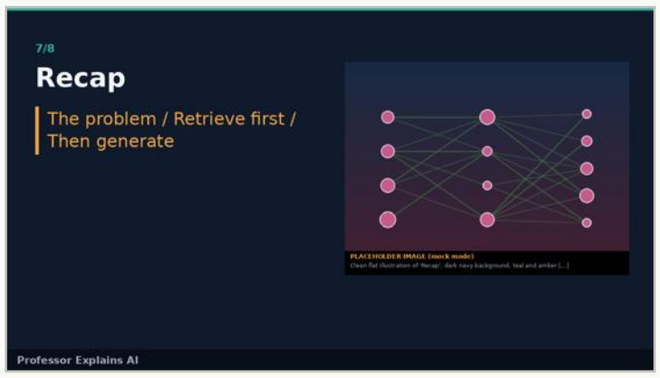

Scene 6 · 0:35–0:41

A real example

VOICE:
Let me give you a real example from my own classroom, where students tried this for the first time.

ON SCREEN: From my classroom

PROFESSOR: Professor records this example himself (requested in review).

Scene 7 · 0:41–0:47

Recap

VOICE:
So, to recap. The problem. Retrieve first. Then generate.

ON SCREEN: The problem / Retrieve first / Then generate

Scene 8 · 0:47–0:54

What should I explain next?

VOICE:
If this helped, subscribe, and tell me in the comments what you want explained next. I read every comment.
